About Project

This project aims to help students or professionals to learn the main concepts of aws-cloud-practitioner-essentials exam

Getting Started

This is an example of how you may give instructions on setting up your project locally. To get a local copy up and running follow these simple example steps.

Prerequisites

This is an example of how to list things you need to use the software and how to install them.

- git
- Virtual Box and extension
- Vagrant

Installation

Clone the repo

```
git clone https://github.com/marcossilvestrini/learning-aws-cloud-practitioner-essen
```

Usage

Use this repository for get learning about aws-cloud-practitioner-essentials exam

Roadmap

- ☑ Create repository
- ☑ Create examples about Exam
- ☑ Create github action for automation tasks
- ☑ Upload simulated exam

Course objectives

unzip awscliv2.zip
./aws/install
rm awscliv2.zip
```

Important Commands

```
# Get version
aws --version
```

Contributing

Contributions are what make the open source community such an amazing place to learn, inspire, and create. Any contributions you make are **greatly appreciated**.

If you have a suggestion that would make this better, please fork the repo and create a pull request. You can also simply open an issue with the tag "enhancement". Don't forget to give the project a star! Thanks again!

1. Fork the Project
2. Create your Feature Branch (`git checkout -b feature/AmazingFeature`)
3. Commit your Changes (`git commit -m 'Add some AmazingFeature'`)
4. Push to the Branch (`git push origin feature/AmazingFeature`)
